

Amendments to the Specification:

On page 9, please replace paragraph [00024] with the following replacement paragraph:

[00024] The network file server 24 includes a cached disk array 28 and a number of data mover computers 25, 26, 27. The network file server 24 is managed as a dedicated network appliance, integrated with popular network operating systems in a way, which, other than its superior performance, is transparent to the end user. The clustering of the data movers 25, 26, 27 as a front end to the cache disk array 28 provides parallelism and scalability. Each of the data movers 25, 26, 27 is a high-end commodity computer, providing the highest performance appropriate for a data mover at the lowest cost. The network file server 27 24 also has a control station 35 29 enabling a system administrator 30 to configure and control the file server.
